

Generate Results Dialog

In the Generate Results dialog, you can specify the output formats and compression options for your results.

NOTE: Generating results executes the transformations on the entire dataset and saves a new copy of the data. Depending on the size of the dataset and available processing resources, this process may take a while

Tip: Columns that have been hidden in the Transformer page still appear in the generated output. Before you run a task, you should verify that all currently hidden columns are ok to include in the output.

Figure: Generate Results dialog

Steps:

1. **Formats:** Select the output formats you want to generate for the results.
 - a. **TDE:** Results are generated in Tableau Data Extract format, which is suitable for import into Tableau.

NOTE: To generate in TDE format, you must also generate CSV results.

2. **Compression:** For text-based outputs, compression can be applied to significantly reduce the size of the output.
3. **Profile Results:** Optionally, you can disable profiling of your results, which may improve execution speed.
4. **Generate Results:** Click this button to begin generating results.

After a task has completed, you can open the results or review the summary of them. See *Results Page*.

Results are written to the home directory specified in your user profile. See *User Profile Page*.

Details of your results are available through the Results Summary page, including links to download results. See *Results Summary Page*.
