

CEILING Function

Computes the **ceiling** of a value, which is the smallest integer that is greater than the input value. Input can be an Integer, a Decimal, a column reference, or an expression.

Basic Usage

Numeric literal example:

 Unknown macro: 'd-lang-syntax'

Output: Generates 3.

Expression example:

 Unknown macro: 'd-lang-syntax'

Output: Returns the smallest integer that is greater than the sum of 2.5 and the value in the `MyValue` column.

Syntax

 Unknown macro: 'd-lang-syntax'

Argument	Required?	Data Type	Description
numeric_value	Y	string, decimal, or integer	Name of column or Decimal or Integer literal to apply to the function

For more information on syntax standards, see *Language Documentation Syntax Notes*.

numeric_value

Name of the column, numeric literal, or numeric expression.

- Missing input values generate missing results.
- Literal numeric values should not be quoted. Quoted values are treated as strings.
- Multiple columns and wildcards are not supported.

Usage Notes:

Required?	Data Type	Example Value
Yes	String (column reference) or Integer or Decimal literal	2 . 5

Examples

Example - Exponential functions

The following example demonstrates how the rounding functions work together. These functions include the following:

- FLOOR - largest integer that is not greater than the input value. See *FLOOR Function*.
- CEILING - smallest integer that is not less than the input value. See *CEILING Function*.
- ROUND - nearest integer to the input value. See *ROUND Function*.
- MOD - remainder integer when input1 is divided by input2. See *Numeric Operators*.
