

# Flows Page

The Flows page displays the flows to which you have access and lets you create, review, and manage them. A **flow** is an object for bringing together and organizing the datasets, recipes, and other objects that you use to generate your results.

- To create a new flow, click **Create Flow**. See *Create Flow Page*.

You can organize your flows into folders. A **folder** is simply a container for your flows. To create a folder, click **Create**. Then, select **Create Folder**. For more information, see *Manage Flows with Folders*.

The screenshot shows the 'Flows' page interface. At the top left, there is a 'Flows' header with a 'Create...' button. On the top right, there is a search bar labeled 'Search... (/)'. Below these is a table with three columns: 'Name', 'Contains', and 'Last Updated'. The table lists three flows: 'SF Restaurants' (2 Datasets, 0 Recipes, updated at 11:52 AM), '2013 POS - refined' (1 Dataset, 0 Recipes, updated at 11:34 AM), and '2013 POS' (6 Datasets, 1 Recipe, updated at 11:34 AM).

Name	Contains	Last Updated
SF Restaurants	2 Datasets, 0 Recipes	Today at 11:52 AM
2013 POS - refined	1 Dataset, 0 Recipes	Today at 11:34 AM
2013 POS	6 Datasets, 1 Recipe	Today at 11:34 AM

**Figure: Flows Page**

## Columns:

- **Name:** The name of the flow.
  - Click the flow name to review the flow, its datasets, and its recipes. See *Flow View Page*.
- **Datasets:** Count of datasets and recipes in the flow.
- **Last Updated:** Timestamp for the last time that the flow was modified.

## Actions:

- **Create:** From the Create menu, choose to create a flow or a folder for holding flows. For more information on folders, see *Manage Flows with Folders*.
- **Search:** To search flow names, enter a string in the search bar. Results are highlighted immediately in the Flows page.
- **Sort:** Click a column header to sort the display by the column's entries.

## Flow options:

The following options are available on the right side of a flow's entry:

- **Edit:** Change the name and description of the flow.
- **Duplicate:** Create a copy of the flow. The copied flow is owned by the user who copied it.
- **Move:** Move the flow to a new or existing folder. See *Manage Flows with Folders*.
- **Delete:** Delete the flow.

**Deleting a flow removes all recipes and related objects contained in the flow. If copies of these objects exist in other flows, they are not touched. Imported datasets are not deleted by this action.**

#### **Folder options:**

For folders, the following options are available in the context menu.

- **Edit Folder name and description:** Change the name and description of the folder.
- **Delete Folder:** Delete the folder and all flows within it.

**Deleting a folder also removes any flows within it. This action cannot be undone.**
