

Search Panel

When you choose to add a new step to your recipe, the Search panel opens in the context panel. Enter text or browse the available transformations to begin building your next step.

Tip: To add a new recipe from anywhere in the Transformer page, press `CTRL/COMMAND + K`. Enter a search string for your transformation step.

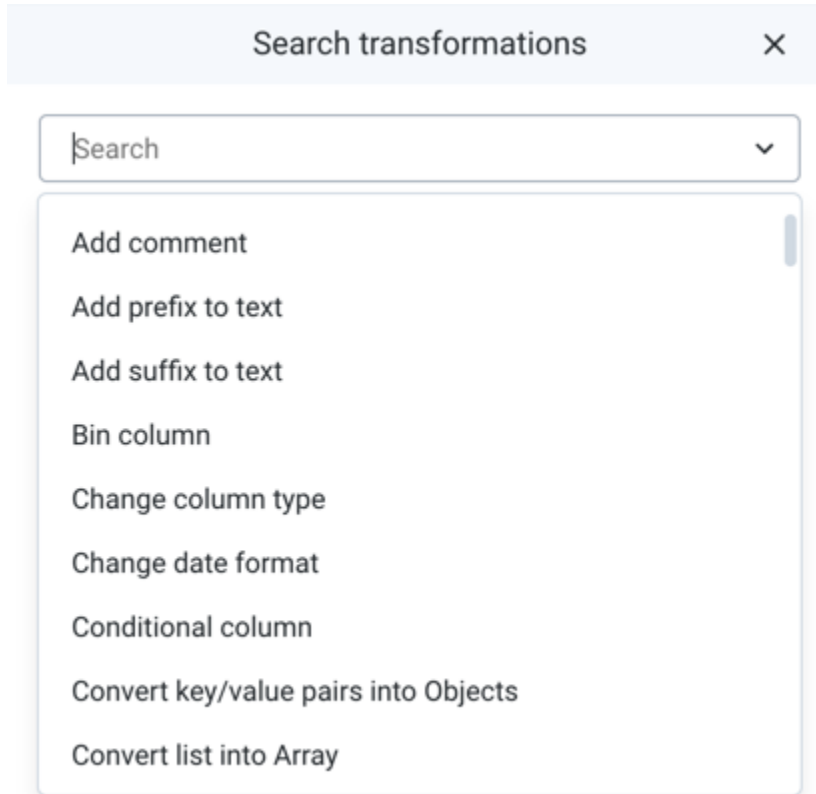

Figure: Search Panel

The available transformations cover many basic and advanced steps based on a transform, function, or higher-level transformation.

Tips:

- If you are familiar with Wrangle transforms, you can enter the transform name in the search bar. For example, type `window`.
- To see a list of all available functions, enter `FUNCTION`. When selected, a New formula transform is pre-specified using the selected function.
- A copied step can be pasted back into the Search panel and modified from the Transform Builder. Copy and paste may not be supported across different releases of the product.

After you have selected the transformation to build, the Transform Builder is pre-populated with some configuration done for you, so you can begin specifying the transformation.

For more information, see *Transform Builder*.
