 - *Example - Basic Usage*

The `CASE` function allows you to perform multiple conditional tests on a set of expressions within a single statement. When a test evaluates to `true`, a corresponding output is generated. Outputs may be a literal or expression.

For more information on the `IF` function, see *IF Function*.

Wrangle vs. SQL: This function is part of Wrangle , a proprietary data transformation language. Wrangle is not SQL. For more information, see *Wrangle Language*.

Basic Usage

Example:

```
case([ Qty <= 10, 'low_qty', Qty >=100, 'high_qty', 'med_qty'])
```

Output: Returns a text string based on the evaluation of the `Qty` column:

- `Qty <= 10` : `low_qty`
- `Qty >= 100` : `high_qty`
- All other values of `Qty` : `med_qty`

Syntax and Arguments

In the following, If the `testX` expression evaluates to `true`, then the `resultX` value is the output.

- Test expressions are evaluated in the listed order.
- Text expressions and results are paired values in an array.
- You must include one or more test expressions.
- Each test must include a result expression. Result expression can be a literal value or an expression that evaluates to a value of a supported data type.
- If a quoted value is included as a test expression, it is evaluated as the value to write for all values that have not yet matched a test (else expression).

```
case([test1, 'result1',test2, 'result2', testn, 'resultn','result_else'])
```

Argument	Required?	Data Type	Description
test1, test2, testn	Y	expression	Expression that is evaluated. Must resolve to <code>true</code> or <code>false</code>

result1, result2, result2, result_else	Y	string	Quoted string that is written if the corresponding test expression evaluates to true.
---	---	--------	---

All of these expressions can be constants (strings, integers, or any other supported literal values) or sophisticated elements of logic, although the test expression must evaluate to a Boolean value.

For more information on syntax standards, see *Language Documentation Syntax Notes*.

test1, test2, testn

These parameters contain the expressions to evaluate. This expression must resolve to a Boolean (`true` or `false`) value.

NOTE: The syntax of a test expression follows the same syntax as the `IF` function. For example, you must use the double-equals signs to compare values (`status == 'Ok'`).

Usage Notes:

Required?	Data Type	Example Value
Yes	Expression that evaluates to <code>true</code> or <code>false</code>	<code>(OrderAge > 90)</code>

result1, result2, result2, result_else

If the corresponding test expression evaluates to `true`, this value is written as the result.

These expressions can literals of any data type or expressions that evaluate to literals of any data type.

Usage Notes:

Required?	Data Type	Example Value
Yes	Literal value or expression	See examples below.

Examples

Tip: For additional examples, see *Common Tasks*.

Example - Basic Usage

The following data represents orders received during the week. Discounts are applied to the orders based on the following rules:

- The standard discount is 5%.
- If an order is for fewer less than 10 units, then the discount is reduced by 5%.
- If an order is for more than 20 units, then the discount is increased by 5%.
- The special Friday discount is 2% more than the standard discount.

OrdDate	CustId	Qty	Std_Disc
5/8/17	C001	4	0.05
5/9/17	C002	11	0.05

5/10/17	C003	4	0.05
5/11/17	C001	25	0.05
5/12/17	C002	19	0.05

Transforms:

To determine the day of the week, you can use the following transformation:

Transformation Name	New formula
Parameter: Formula type	Single row formula
Parameter: Formula	weekday(Date)

You can build the discount rules into the following transform, which generates the `Disc` column:

Transformation Name	New formula
Parameter: Formula type	Single row formula
Parameter: Formula	case([Qty<10, Std_Disc - 0.05, Qty>=20, Std_Disc + 0.05, weekday_Date == 5, Std_Disc + 0.02, Std_Disc])
Parameter: New column name	'Disc'

Results:

OrdDate	CustId	Qty	Std_Disc	Disc
5/8/17	C001	4	0.05	0
5/9/17	C002	11	0.05	0.05
5/10/17	C003	4	0.05	0
5/11/17	C001	25	0.05	0.1
5/12/17	C002	19	0.05	0.07
