

Create User Account

By default, users can create their own accounts.

- As needed, self-registration can be disabled, so that all users must be created by an administrator. See *Configure User Self-Registration*.

Creating your own user account

Steps:

1. Users may self-register at the following address:
`http://<host_name>:<port_number>`
where:
<host_name> is the host of the Trifacta® application.
<port_number> is the port number to use. Default is 3005.
2. Click the Register link.
3. Enter your credentials in the spaces provided. A valid email address is required.
4. As soon as the account is created, you may login at the first address. See *Login*.

Creating users when self-registration is disabled

When self-registration is disabled, an administrator must manually create the accounts for users. Administrators can create accounts at the following address:

`http://<host_name>:<port_number>/register`

 **NOTE:** If SSO or secure impersonation is enabled in your environment, administrators must apply a principal value to each newly created user. See *Manage Users*.

When a new account is created, an email is sent to the address for the created user.

Troubleshooting

Account Not Configured login error

If you have created a user account, you may see the following error message when you try to login:

Account Not Configured

Your Trifacta user account has not been completely configured or is disabled.

[Configure storage settings](#) or contact your Trifacta Administrator.

[Return to Sign In](#)

Figure: Account Not Configured

In this case, the account may require additional configuration. In SSO or Kerberos environments, an administrator may need to provision a SSO or Hadoop principal value to be applied to the user account. See *Admin Settings Page*.
