Basic Install Workflow

1. Review the pre-installation checklist and other system requirements. See *Install Preparation*.
2. Review the requirements for your specific installation scenario in the following sections.
3. Install the software. See *Install Software*.
4. Install the databases. See *Install Databases*.
5. Configure your installation.
6. Verify operations.

Notation

In this guide, JSON settings are provided in dot notation. For example, `webapp.selfRegistration` refers to a JSON block `selfRegistration` under `webapp`:

```
{  
  ...  
  "webapp": {  
    "selfRegistration": true,  
    ...  
  }  
  ...  
}
```
