

## at Parameter

Identifies the start and end point of the pattern to interest.

Parameter inputs are in the form of  $x, y$  where  $x$  and  $y$  are positive integers indicating the starting character and ending character, respectively, of the pattern of interest.

- $x$  must be less than  $y$ .
- If  $y$  is greater than the length of the value, the pattern is defined to the end of the value, and a match is made.
