

# Add Schedule Dialog

To add a schedule to your flow, click the drop-down menu in the Flow View page, and select **Add Schedule**.

**NOTE:** For a dataset with parameters, scheduled times are used when resolving date range parameters.

**NOTE:** Do not schedule executions through Flow View in a Prod instance when Deployment Manager is enabled.

- Schedules defined in Flow View are applied to Active and Non-Active releases in Production environments.
- If the scheduled release is deactivated, the schedule still exists, and the jobs are executed on a flow that is now out-of-date.
- For more information, see *Overview of Deployment Manager*.

The screenshot shows the 'Add Schedule' dialog box. At the top, there is a title bar with the text 'Add Schedule' and a close button (X). Below the title bar, the dialog is organized into several sections:

- Scheduling Options:** This section includes a 'Timezone' dropdown menu currently set to 'America/Los\_Angeles'.
- Frequency:** This section includes a 'Frequency' dropdown menu set to 'Weekly', followed by 'on' and a day dropdown menu set to 'Sunday', then 'at' and a time dropdown menu set to '12:00', and finally 'AM' and a period dropdown menu. An 'Add' button is located to the right of the time dropdown.
- Variables:** This section is titled 'Variables' and has a subtitle 'Set variable values for this schedule's executions'. It contains a variable name 'regionNum' and a text input field with the value '01'.

At the bottom right of the dialog, there are two buttons: 'Cancel' and 'Save'.

**Figure: Add Schedule dialog**

## Scheduling Options

- **Timezone:** Select the timezone to apply to the schedule.
- **Frequency:**
  - **Hourly, Daily, Weekly, Monthly:** Run the schedule at the specified moment for the interval.

**Tip:** For drop-downs showing days of the week or days of the month, you can click multiple values to select them.

- **cron:** Set the schedule according to cron syntax. For more information, see *cron Schedule Syntax Reference*.

To add another trigger for the flow's schedule, click **Add**.

To create the schedule, click **Save**.

## Variables

If your flow contains one or more datasets with parameters, you can apply overrides to any variables associated with those datasets. When the scheduled job is executed, the variable value is applied to job at runtime.

For each listed variable, you can modify its value.

For more information, see *Overview of Parameterization*.
