

API Releases Package Get v4

This is the latest version of the APIs.

Contents:

- *Required Permissions*
- *Request*
- *Response*
- *Reference*

Retrieve a package containing the definition of the flow for the specified release.

NOTE: Releases pertain to Production instances of the Trifacta® platform. For more information, see *Overview of Deployment Manager*.

NOTE: This method exports flows from a Product instance, which is different from exporting using the `flows/:id/package`, which exports from the Dev instance. Connection identifiers and paths may differ between the two instances. This method is typically used for archiving flows from the Deployment Manager.

Response body is the contents of the package. Package contents are a ZIPped version of the flow definition.

Version: v4

Required Permissions

NOTE: Each request to the Trifacta® platform must include authentication credentials. See *API Authentication*.

Request

Request Type: GET

Endpoint:

```
/v4/releases/<id>/package
```

Parameter	Description
<id>	Internal identifier of the release to retrieve.

Request URI - Example:

```
/v4/releases/7/package
```

Request Body:

None.

Response

Response Status Code - Success: 200 - OK

Response Body Example:

Response body is the contents of the ZIP file. This package should be downloaded to your local environment.

Reference

None.
