

API People AssetTransfer v4

This is the latest version of the APIs.

NOTE: This API endpoint may be unstable and is under review. Avoid using if possible. For more information, please contact *Trifacta Support*.

Contents:

- *Required Permissions*
- *Request*
- *Response*
- *Reference*

Transfers all of the assets owned by one user to another.

NOTE: The asset transfer endpoint cannot be applied to deleted users. If you are deleting a user, you must transfer the assets first. Then, you can delete the user. This endpoint does not delete users.

NOTE: No checks are made regarding access to the transferred objects for the receiving user. It is possible to transfer ownership of assets that the receiving user cannot access.

NOTE: Shared assets are not transferred.

NOTE: This transfer cannot be undone. You can transfer the receiving user's assets back to the target user, but that step transfers all assets.

Version: v4

Required Permissions

The authenticated user must be an admin.

NOTE: Each request to the Trifacta® platform must include authentication credentials. See *API Authentication*.

Request

Request Type: PATCH

Endpoint:

```
/v4/people/<tid>/assetTransfer/<id>
```

where:

Parameter	Description
<tid>	Internal identifier of the targeted user to receive the transferred assets.
