

# Jobs Page

In the Jobs page, you can track the status of all of your jobs. Jobs can be initiated from:

- Flow View: See *Flow View Page*.
- Transformer page: See *Transformer Page*.

The screenshot shows the 'Jobs' page with a search bar and navigation tabs. The table below lists several jobs with their respective users, flow/output names, statuses, and start times.

Job	User	Flow / Output	Status	Started
69	Administrator (you)	<a href="#">Dataset with Parameters Flow / 30015427:</a>	Completed	Today at 3:52 PM Ran for a few seconds
68	Joe H	<a href="#">drug15q4-head-txt - 9 / drug15q4-head-txt</a>	Completed	Today at 3:43 PM Ran for a few seconds
67	sander	<a href="#">perf / test_runs - 2</a>	Completed	Today at 3:41 PM Ran for a few seconds
66	Joe H	<a href="#">drug15q4-head-txt - 8 / drug15q4-head-txt</a>	Completed	Today at 3:41 PM Ran for a few seconds
65	Joe H	<a href="#">drug15q4-head-txt - 7 / drug15q4-head-txt</a>	Completed	Today at 3:39 PM Ran for a few seconds
64	Joe H	<a href="#">drug15q4-head-txt - 6 / drug15q4-head-txt</a>	Completed	Today at 3:31 PM Ran for a few seconds
63	Joe H	<a href="#">drug15q4-head-txt - 5 / drug15q4-head-txt</a>	Completed	Today at 3:25 PM Ran for a few seconds

**Figure: Jobs page**

## Job Types:

Each job listed in the Jobs page is a grouping of related jobs acting on the same recipe and dataset(s). Each of these **jobgroups** breaks down into one or more of the following job types.

**Tip:** To review the status of individual jobs within a jobgroup, hover over the value in the Status column for the jobgroup.

- **Transform:** These jobs perform transformations on imported datasets based on the recipe from which the job was launched.
- **Profile:** If enabled as part of the job definition, a Profile job generates a visual summary of the results of your transformation job.
  - Profiling jobs may take longer than transformation jobs.
  - Even when selected, profiling jobs may not appear in the Jobs page. In some cases, the running environment may fold a profiling job into a transform job for optimization reasons.

**NOTE:** When the profiling job is run as part of the transform job, there is no listing for profiling in the mouse-over popup.

- See *Job Results Page*.

- **Publishing:** As needed, job results can be published from their target location to another location or data store. These jobs are tracked separately as publishing jobs. For more information, see *Export Results Window*.

Publishing jobs also include internal tasks of writing results in file format to the designated location in the base storage layer. These jobs exist in all jobgroups.

- **Ingest:** For larger datasets from some relational connections, the Trifacta platform transfers the data from the source to the default storage layer for faster processing. These ingest jobs occur before any transform or profiling takes place.

#### Access:

- You can review and drill into any job that you initiated.
- You can also drill into any job that was initiated from a flow that has been shared with you.
- Administrators can review read-only listings for jobs created by other users.

#### Columns:

- **Job:** Internal identifier for the job. This value is unique for all jobs in your Trifacta® deployment.
  - Click the ID number to explore details about the job. See *Job Results Page*.
- **User:** The Trifacta user that initiated the job.
- **Flow/Output:**
  - Click the link to view details.
  - See *Flow View Page*.
- **Status:**
  - **Queued:** Job has been queued for execution.
  - **Running:** Job is in progress.
  - **Completed:** Job has successfully executed.
  - **Canceled:** Job was canceled by user.

**Failed:** Job failed to complete.

**NOTE:** You can re-run a failed job from the Transformer page. If you have since modified the recipe, those changes are applied during the second run. See *Transformer Page*.

- **Publish Failed:** Publishing job failed to complete.
- **Started:** Start timestamp for the job.

#### Actions:

- **Filter:** Click one of the tabs to filter the display to show only the listings for the selected job status.
- **Search:** Enter text in the search field to filter the listed jobs by job ID, flow name, dataset name, or the name of the user who created it. The list is filtered as you type.

#### Context menu:

Next to the job listing, click the options menu to see the following:

- **View results:** If profiling was selected, you can view the results. See *Job Results Page*.
- **View steps and dependencies:** View steps of the recipe being executed and any dependencies referenced in the recipe.
- **Export Results:** Export the results of a completed job. See *Export Results Window*.
- **Cancel Job:** Select to cancel a job that is currently being executed.
- **Download Logs:** Download the logs for the job. If the job is in progress, log information is likely to be incomplete.

## **Run and Manage Jobs from the Command Line**

The Trifacta platform provides a command line interface that enables administrators to execute and monitors from the command line. As needed, completed jobs can be published to other datastores.

For more information, see *CLI for Jobs*.
