

# API WrangledDatasets Put PrimaryInputDataset v3

## Contents:

- *Required Permissions*

- *Reference*

 In Release 4.2, the wrangled dataset object was removed from the application interface. This API endpoint remains, as the internal platform objects have not been modified. For more information, see *Changes to the Object Model*.

Updated the primary input dataset for the specified wrangled dataset. Each wrangled dataset must have one and only one primary input dataset, which can be an imported or wrangled dataset.

This action performs a dataset swap for the source of a wrangled dataset, which can be done through the UI. See *Flow View Page*.

 **Tip:** After you have created a job via API, you can use this API to swap out the source data for the job's dataset. In this manner, you can rapidly re-execute a pre-existing job using fresh data. See *API JobGroups Create v3*.

**Version:** v3

## Required Permissions

 **NOTE:** Each request to the Trifacta® platform must include authentication credentials. See *API Authentication*.
