

# Share a Flow

You can allow other users to work on flows that you own. Flow **collaborators** have almost all of the same permissions as flow **owners**.

**NOTE:** Users of a shared flow must have read access to the underlying data sources to access the datasets of a shared flow. If they do not have dataset access, collaborators can still access the flow but have more limited capabilities.

**NOTE:** When you share a flow that contains a dataset sourced from Microsoft Excel, the user with whom the flow is shared may receive a `Could not parse` error. In this case, the user does not have access to the original sample. The workaround is to take a new sample or to run a job on the full dataset.

## Steps:

1. In the Flows page, locate the flow to share.
2. From the context menu on the right side of the screen, select **Share**.
3. In the Share Flow dialog, enter the name of the user or users with whom you would like to share the flow.
  - a. You can specify the privilege level of the user to whom you are sharing.
  - b. For more information, see *Share Flow Dialog*.
4. Click **Add**.
5. The selected users can now see the flow and interact with its objects in the Shared with Me tab of the Flows page. See *Flows Page*.

For more information on the privileges of collaborators, see *Overview of Sharing*.
