

Hive Browser

Use the Hive browser to read sources stored as Hive database tables and views or select or create tables to which to publish job results.

- Your Trifacta® deployment must be connected to a running instance of Hive.
- The Hive browser appears when you select the Hive tab to create a dataset. See *Import Data Page*.
- When specifying a job, you can choose to write a publishing action to Hive. See *Run Job Page*.
- For more information on interacting with Hive, see *Using Hive*.

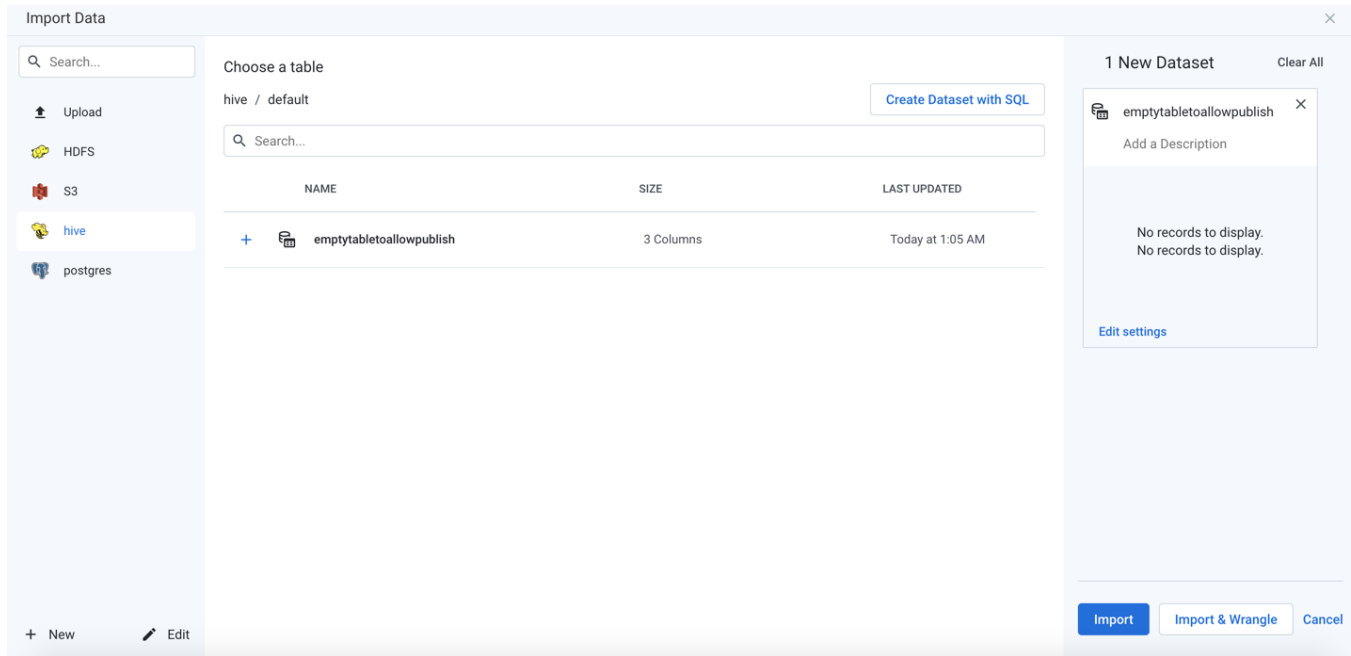

Figure: Hive Browser

Browse Hive

Use the links and icons to browse for Hive databases and tables.

NOTE: Avoid using the Back button on your browser, which exits the Hive browser without applying changes to your configuration.

Identifier	Type	Description
	Database	Click these links to open a Hive database to reveal its tables.
	Table	Click the Plus icon to select this Hive table as your source. To preview its data, hover over the name of the table, and then click the Eye icon.

Tip: Sizes and update timestamps are calculated and displayed next to tables. They are not displayed next to databases.

	View	<p>Click the Plus icon to select this view as your source.</p> <p>To preview its data, hover over the view name and then click the Eye icon.</p> <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;"> <p>NOTE: Previewing complex views may impact performance.</p> </div>
	Page navigation	<p>Use these links to navigate between pages of databases and tables.</p> <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;"> <p>NOTE: In some cases, subsequent pages of tables may be blank, and counts of tables may not match displayed figures. This is a known issue.</p> </div>
<p>hive / default</p>	Breadcrumb	<p>Click the links in the breadcrumb trail to navigate.</p>

Search List

To filter the list of databases or tables, enter a string in the Search box. The filter is applied as you type and matches anywhere in the name of a currently displayed database or table name.

Create Dataset with SQL

As needed, you can pre-filter the selected table or view inside the database. By entering a custom SQL statement, you can remove unnecessary data from the dataset that is extracted from the database, which enables faster and more meaningful imports of your database data. See *Create Dataset with SQL*.

For more information, see *Enable Custom SQL Query*.
