

ARRAYCROSS Function

Generates a nested array containing the cross-product of all elements in two or more arrays.

- Input arrays can be referenced as column names or array literals.
- If Array1 has M elements and Array2 has N elements, the generated array has M X N elements.

NOTE: Be careful applying this function across columns of large arrays. A limit is automatically applied on large arrays to prevent overloading the browser. Avoid apply the `ARRAYCROSS` transform to very wide columns.

Wrangle vs. SQL: This function is part of Wrangle , a proprietary data transformation language. Wrangle is not SQL. For more information, see *Wrangle Language*.

Basic Usage

Array literal reference example:

```
arraycross([["A","B"], ["1", "2", "3"]])
```

Output: Returns a single array:

```
[["A", "1"], ["A", "2"], ["A", "3"], ["B", "1"], ["B", "2"], ["B", "3"]]
```

Column reference example:

```
arraycross(array1,array2,array3)
```

Output: Returns an array containing a single array listing all combinations of elements between `array1`, `array2`, and `array3`.

Syntax and Arguments

```
arraycross(array_ref1,array_ref2)
```

Argument	Required?	Data Type	Description
array_ref1	Y	string or array	Name of first column or first array literal to apply to the function
array_ref2	Y	string or array	Name of second column or second array literal to apply to the function

For more information on syntax standards, see *Language Documentation Syntax Notes*.

array_ref1, array_ref2

Array literal or name of the array column whose intersection you want to derive.

Usage Notes:

Required?	Data Type	Example Value

Yes	Array literal or column reference	myArray1, myArray2
-----	-----------------------------------	--------------------

Examples

Tip: For additional examples, see *Common Tasks*.

Example - Simple cross example

This simple example illustrates how the following functions operate on nested data.

- **ARRAYCONCAT** - Concatenate multiple arrays together. See *ARRAYCONCAT Function*.
- **ARRAYINTERSECT** - Find the intersection of elements between multiple arrays. See *ARRAYINTERSECT Function*.
- **ARRAYCROSS** - Compute the cross product of multiple arrays. See *ARRAYCROSS Function*.
- **ARRAYUNIQUE** - Generate unique values across multiple arrays. See *ARRAYUNIQUE Function*.

Source:

Code formatting has been applied to improve legibility.

Item	ArrayA	ArrayB
Item1	["A" , "B" , "C"]	["1" , "2" , "3"]
Item2	["A" , "B"]	["A" , "B" , "C"]
Item3	["D" , "E" , "F"]	["4" , "5" , "6"]

Transformation:

You can apply the following transforms in the following order. Note that the column names must be different from the transform name, which is a reserved word.

Transformation Name	New formula
Parameter: Formula type	Single row formula
Parameter: Formula	ARRAYCONCAT([Letters,Numerals])
Parameter: New column name	'concat2'

Transformation Name	New formula
Parameter: Formula type	Single row formula
Parameter: Formula	ARRAYINTERSECT([Letters,Numerals])
Parameter: New column name	'intersection2'

Transformation Name	New formula
Parameter: Formula type	Single row formula
Parameter: Formula	ARRAYCROSS([Letters,Numerals])

Parameter: New column name	'cross2'
Transformation Name	New formula
Parameter: Formula type	Single row formula
Parameter: Formula	ARRAYUNIQUE([Letters,Numerals])
Parameter: New column name	'unique2'

Results:

For display purposes, the results table has been broken down into three separate sets of columns.

Column set 1:

Item	ArrayA	ArrayB	concat2	intersection2
Item1	["A" , "B" , "C"]	["1" , "2" , "3"]	["A" , "B" , "C" , "1" , "2" , "3"]	[]
Item2	["A" , "B"]	["A" , "B" , "C"]	["A" , "B" , "A" , "B" , "C"]	["A" , "B"]
Item3	["D" , "E" , "F"]	["4" , "5" , "6"]	["D" , "E" , "F" , "4" , "5" , "6"]	[]

Column set 2:

Item	cross2
Item1	[["A" , "1"] , ["A" , "2"] , ["A" , "3"] , ["B" , "1"] , ["B" , "2"] , ["B" , "3"] , ["C" , "1"] , ["C" , "2"] , ["C" , "3"]]
Item2	[["A" , "A"] , ["A" , "B"] , ["A" , "C"] , ["B" , "A"] , ["B" , "B"] , ["B" , "C"]]
Item3	[["D" , "4"] , ["D" , "5"] , ["D" , "6"] , ["E" , "4"] , ["E" , "5"] , ["E" , "6"] , ["F" , "4"] , ["F" , "5"] , ["F" , "6"]]

Column set 3:

Item	unique2
Item1	["A" , "B" , "C" , "1" , "2" , "3"]
Item2	["A" , "B" , "C"]
Item3	["D" , "E" , "F" , "4" , "5" , "6"]
