

Database Browser

The database browser enables you to interact with databases that are connected to Trifacta® Self-Managed Enterprise Edition.

The database browser appears when:

- You select one of the database tabs to create an imported dataset. See *Import Data Page*.
- You add a publishing action in the Run Job page and choose a database connection through which to write the job results. See *Run Job Page*.

Browse Databases

Use the links and icons to browse databases and their tables and views.

NOTE: Depending on the database type, rows may not be displayed in a specific order.

NOTE: Avoid using the Back button on your browser, which exits the browser without applying changes to your configuration.

Identifier	Type	Description
	Database	Click these links to open a database to reveal its tables and views.
	Schema	(Postgres only) Click a schema link to display the tables and views that use the schema.

	Table	<p>Click the Plus icon to select this table.</p> <p>To preview its data, hover over the name of the table, and then click the Eye icon.</p> <div data-bbox="782 258 1456 373" style="border: 1px solid #c8e6c9; padding: 5px;"> <p>Tip: Sizes and update timestamps are calculated and displayed next to tables. They are not displayed next to databases.</p> </div> <div data-bbox="782 399 1456 489" style="border: 1px solid #e0e0e0; padding: 5px;"> <p>NOTE: Column count information is not available for nested tables.</p> </div>
	View	<p>Click the Plus icon to select this view as your source.</p> <p>To preview its data, hover over the view name and then click the Eye icon.</p> <div data-bbox="782 653 1456 730" style="border: 1px solid #e0e0e0; padding: 5px;"> <p>NOTE: Previewing complex views may impact performance.</p> </div>
	Page navigation	<p>Use these links to navigate between pages of databases and tables and views.</p> <div data-bbox="782 850 1456 961" style="border: 1px solid #e0e0e0; padding: 5px;"> <p>NOTE: In some cases, subsequent pages of tables and views may be blank, and counts of tables and views may not match displayed figures. This is a known issue.</p> </div>
<p>postgres / public</p>	Breadcrumb	<p>Click the links in the breadcrumb trail to navigate.</p>

Search List

To filter the list, enter a string in the Search box. The filter is applied as you type and matches anywhere in the name of a currently displayed database, table, or view name.

Create Dataset with SQL

As needed, you can pre-filter a selected table or view inside the database prior to import. By entering a custom SQL statement, you can remove unnecessary data from the dataset that is extracted from the database, which enables faster and more meaningful imports of your database data. See *Create Dataset with SQL*.
