

Database Browser

Feature Availability: This feature is available in the following editions:

- Trifacta® Enterprise Edition
- Trifacta Professional Edition
- Trifacta Premium

Contents:

- *Browse Databases*
- *Search List*
- *Preview Table Data*
- *Create Dataset with SQL*

The database browser enables you to interact with databases that are connected to Trifacta®.

The database browser appears when:

- You select one of the database tabs to create an imported dataset. See *Import Data Page*.
- You add a publishing action in the Run Job page and choose a database connection through which to write the job results. See *Run Job Page*.

For more information about interacting with databases through the product, see *Using Databases*.

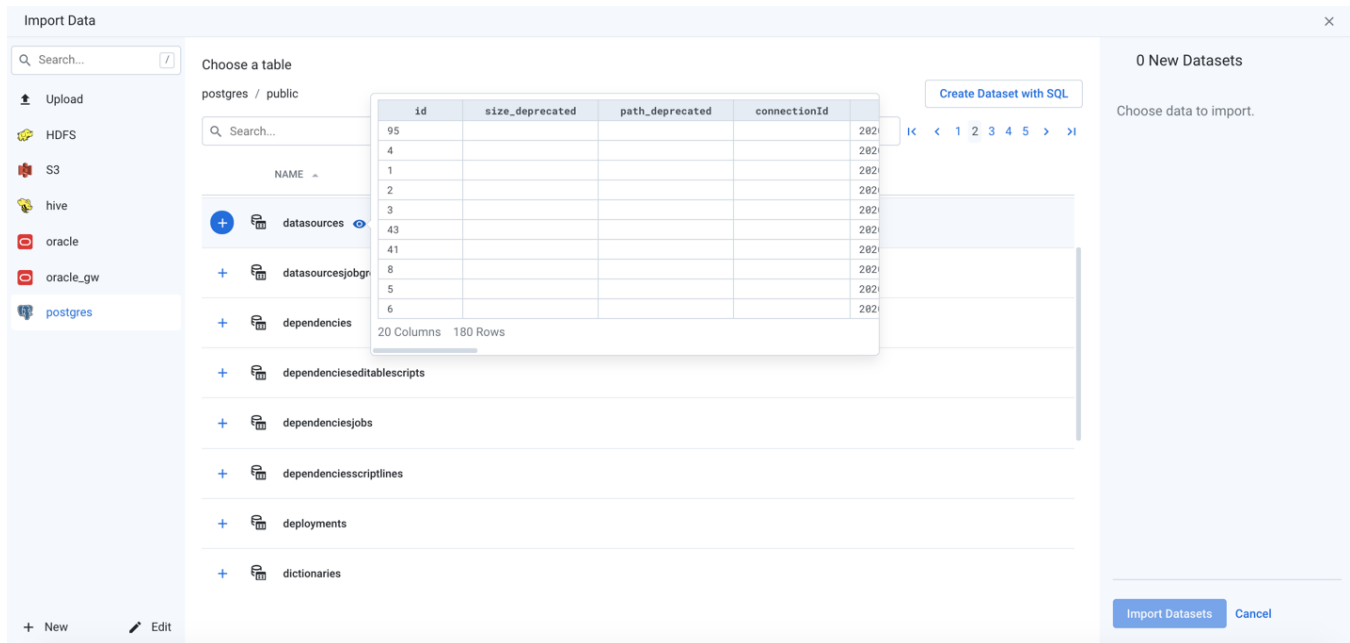

Figure: Database Browser

Browse Databases

Use the links and icons to browse databases and their tables and views.

NOTE: Avoid using the Back button on your browser, which exits the browser without applying changes to your configuration.

Identifier	Type	Description
	Database	Click these links to open a database to reveal its tables and views.
	Schema	(Postgres only) Click a schema link to display the tables and views that use the schema.
	Table	Click the Plus icon to select this table. To preview its data, hover over the name of the table, and then click the Eye icon. Tip: Sizes and update timestamps are calculated and displayed next to tables. They are not displayed next to databases. NOTE: Column count information is not available for nested tables.
	View	Click the Plus icon to select this view as your source. To preview its data, click the Eye icon next to the view name. NOTE: Previewing complex views may impact performance.
	Page navigation	Use these links to navigate between pages of databases and tables and views. NOTE: In some cases, subsequent pages of tables and views may be blank, and counts of tables and views may not match displayed figures. This is a known issue.
postgres / public	Breadcrumb	Click the links in the breadcrumb trail to navigate.

Search List

To filter the list, enter a string in the Search box. The filter is applied as you type and matches anywhere in the name of a currently displayed database, table, or view name.

Preview Table Data

Database tables are displayed by name only. To preview the data in the table, click the Eye icon next to the name of the table.

Tip: Table previews include available metadata information, such as column headers and column and row counts.

NOTE: Depending on the database type, rows may not be displayed in a specific order.

Create Dataset with SQL

As needed, you can pre-filter a selected table or view inside the database prior to import. By entering a custom SQL statement, you can remove unnecessary data from the dataset that is extracted from the database, which enables faster and more meaningful imports of your database data. See *Create Dataset with SQL*.
