- When you mouse over a step, you can choose to edit or remove the step or perform other operations. See below.

NOTE: If you select a step before the latest one in your recipe, the data grid is updated to reflect the state of the sample at that time. All subsequent steps are grayed out in the Recipe panel. When you run a job, all steps in the entire recipe are executed.

NOTE: In a dataset that is shared, multiple users cannot make changes to the recipe at the same time.

- To insert a new step, click where you want to insert and then click **Add Step**.

Recipe Options

- **New Step:** Click this button to search for a transformation to insert as a new step in the recipe at the currently selected location. See *Search Panel*.
- Click the X icon to close the panel.

NOTE: When you select Display Wrangle for the first time, longer steps in your recipe may not be completely visible. Reload the page to see the Show More link on these steps. This is a known issue.

NOTE: Wrangle recipes are stored in the Trifacta® database. You cannot upload new or modified recipes to the platform.

Tip: The downloaded CSV reflects the sample modified up to the currently selected recipe step, so you can use this to acquire and review data transformation in progress. For more information, see *Take a Snapshot*.
