

# ARRAYUNIQUE Function

Generates an array of all unique elements among one or more arrays.

- Inputs are column names or array literals.
- If an element appears twice in one or more arrays, it is listed once in the output array.

**Wrangle vs. SQL:** This function is part of Wrangle , a proprietary data transformation language. Wrangle is not SQL. For more information, see *Wrangle Language*.

## Basic Usage

### Array literal reference example:

```
arrayunique([[ "A" , "B" ], [ "A" , "C" ]])
```

**Output:** Returns a single array:

```
[ "A" , "B" , "C" ]
```

### Single-column reference example:

```
arrayunique([array1])
```

**Output:** Returns a single array of all unique elements in array1 .

### Multi-column reference example:

```
arrayunique([array1,array2])
```

**Output:** Returns a single array listing all unique elements in array1 and array2 .

## Syntax and Arguments

```
arrayunique(array_ref1,array_ref2)
```

Argument	Required?	Data Type	Description
array_ref1	Y	string or array	Name of first column or first array literal to apply to the function
array_ref2	N	string or array	Name of second column or second array literal to apply to the function

For more information on syntax standards, see *Language Documentation Syntax Notes*.

### array\_ref1, array\_ref2

Array literals or names of the array columns whose unique elements you want to derive.

### Usage Notes:

Required?	Data Type	Example Value
Yes (at least one)	Array literal or column reference	myArray1, myArray2

## Examples

**Tip:** For additional examples, see *Common Tasks*.

### Example - Simple unique example

This simple example illustrates how the following functions operate on nested data.

- **ARRAYCONCAT** - Concatenate multiple arrays together. See *ARRAYCONCAT Function*.
- **ARRAYINTERSECT** - Find the intersection of elements between multiple arrays. See *ARRAYINTERSECT Function*.
- **ARRAYCROSS** - Compute the cross product of multiple arrays. See *ARRAYCROSS Function*.
- **ARRAYUNIQUE** - Generate unique values across multiple arrays. See *ARRAYUNIQUE Function*.

#### Source:

Code formatting has been applied to improve legibility.

Item	ArrayA	ArrayB
Item1	[ "A" , "B" , "C" ]	[ "1" , "2" , "3" ]
Item2	[ "A" , "B" ]	[ "A" , "B" , "C" ]
Item3	[ "D" , "E" , "F" ]	[ "4" , "5" , "6" ]

#### Transformation:

You can apply the following transforms in the following order. Note that the column names must be different from the transform name, which is a reserved word.

<b>Transformation Name</b>	New formula
<b>Parameter: Formula type</b>	Single row formula
<b>Parameter: Formula</b>	ARRAYCONCAT( [Letters,Numerals] )
<b>Parameter: New column name</b>	'concat2'

<b>Transformation Name</b>	New formula
<b>Parameter: Formula type</b>	Single row formula
<b>Parameter: Formula</b>	ARRAYINTERSECT( [Letters,Numerals] )
<b>Parameter: New column name</b>	'intersection2'

<b>Transformation Name</b>	New formula
<b>Parameter: Formula type</b>	Single row formula

<b>Parameter: Formula</b>	ARRAYCROSS([Letters,Numerals])
<b>Parameter: New column name</b>	'cross2'

<b>Transformation Name</b>	New formula
<b>Parameter: Formula type</b>	Single row formula
<b>Parameter: Formula</b>	ARRAYUNIQUE([Letters,Numerals])
<b>Parameter: New column name</b>	'unique2'

## Results:

For display purposes, the results table has been broken down into three separate sets of columns.

### Column set 1:

Item	ArrayA	ArrayB	concat2	intersection2
Item1	[ "A" , "B" , "C" ]	[ "1" , "2" , "3" ]	[ "A" , "B" , "C" , "1" , "2" , "3" ]	[ ]
Item2	[ "A" , "B" ]	[ "A" , "B" , "C" ]	[ "A" , "B" , "A" , "B" , "C" ]	[ "A" , "B" ]
Item3	[ "D" , "E" , "F" ]	[ "4" , "5" , "6" ]	[ "D" , "E" , "F" , "4" , "5" , "6" ]	[ ]

### Column set 2:

Item	cross2
Item1	[ [ "A" , "1" ] , [ "A" , "2" ] , [ "A" , "3" ] , [ "B" , "1" ] , [ "B" , "2" ] , [ "B" , "3" ] , [ "C" , "1" ] , [ "C" , "2" ] , [ "C" , "3" ] ]
Item2	[ [ "A" , "A" ] , [ "A" , "B" ] , [ "A" , "C" ] , [ "B" , "A" ] , [ "B" , "B" ] , [ "B" , "C" ] ]
Item3	[ [ "D" , "4" ] , [ "D" , "5" ] , [ "D" , "6" ] , [ "E" , "4" ] , [ "E" , "5" ] , [ "E" , "6" ] , [ "F" , "4" ] , [ "F" , "5" ] , [ "F" , "6" ] ]

### Column set 3:

Item	unique2
Item1	[ "A" , "B" , "C" , "1" , "2" , "3" ]
Item2	[ "A" , "B" , "C" ]
Item3	[ "D" , "E" , "F" , "4" , "5" , "6" ]
