

Changes to Configuration

Contents:

- *Release Updates*
 - *Release 8.2*
 - *Release 8.1*
 - *Release 8.0*
 - *Release 7.10*

To assist administrators in managing configuration, these section provides a per-release set of updates to configuration.

- Settings pertaining to the project and its users are available through a different page. From the left nav bar, select **User menu > Admin console > Project settings**. See *Dataprep Project Settings Page*.

Release Updates

Release 8.2

Photon running environment now enabled through Admin console

You can now enable or disable Photon execution through the Admin console. For more information, see *Dataprep Project Settings Page*.

Removed settings

The features for the following settings are now a part of the core product and can no longer be disabled. These settings have been removed.

| Settings | Setting Description | Notes |
|---|--|---|
| Detect maximum column count in XLSX sheet | When you have enabled the Apache POI method for converting Excel files, you can enable this feature to force the conversion service to detect the maximum number of columns in an Excel sheet before beginning the conversion. | Set to true by default, so this setting was no longer needed. |
| Enable Apache POI based converter for Excel data conversion | When this setting is enabled, the conversion service uses the Java-based Apache POI converter to convert Excel data for ingestion into the product. | Set to true by default, so this setting was no longer needed. |

Release 8.1

Preferences area has been changed

The following changes have been applied to the Preferences area of the Trifacta application:

- **Project Settings:** The settings in this page have been migrated to the Preferences page for users and to other pages for project-level settings. See below.

NOTE: The contents of the Project Settings link in this release have been moved to other pages. This link now points to the page that contained Dataprep Settings previously.

- **Execution Settings:** Default settings for each user for job executions on Dataflow have been moved from the Project Settings page to a new page. See *Execution Settings Page*.
- **Dataprep Project Settings:** The Dataprep Settings page has been renamed to the Project Settings page.

NOTE: Per project, the product is now disabled through this page.

For more information, see *Dataprep Project Settings Page*.

Release 8.0

Collaboration settings apply to both flows and plans

In previous releases, the collaboration features (export, import, and sharing) for flows and plans were managed under different settings. These configuration flags to enable the following capabilities have been consolidated:

NOTE: When plans have been enabled, the following flags apply to both flows and plans.

| Old Setting | New Setting | Doc for Flows | Doc for Plans |
|--------------|-------------|---------------------|---------------------|
| Flow export | Export | <i>Export Flow</i> | <i>Export Plan</i> |
| Flow import | Import | <i>Import Flow</i> | <i>Import Plan</i> |
| Flow sharing | Sharing | <i>Share a Flow</i> | <i>Share a Plan</i> |

For more information on modifying these settings, see *Dataprep Project Settings Page*.

Release 7.10

Ability to list users is now configurable

Beginning in this release, workspace administrators can choose whether or not individual users are able to see lists of all users in the workspace. When enabled, for example, users who are trying to share their flows can review the list of all workspace users from which they can select the users to share.

NOTE: Accessible information can include user email addresses. Some workspace administrators may choose to disable this feature for security reasons. Users are still able to select users if their full email addresses are known.

NOTE: For Dataprep by Trifacta Legacy workspaces, this feature is disabled by default.

For more information, see *Dataprep Project Settings Page*.
