Modify the specified outputobject.

Version: v4

Relevant terms:

Term	Description
outputObjects	An outputObject is a definition of one or more types of outputs and how they are generated. It must be associated with a recipe. NOTE: An outputObject must be created for a recipe before you can run a job on it. One and only one outputObject can be associated with a recipe.
writeSettings	A writeSettings object defines file-based outputs within an outputObject. Settings include path, format, compression, and delimiters.
publications	A publications object is used to specify a table-based output and is associated with an outputObject. Settings include the connection to use, path, table type, and write action to apply.
