

Credit Card Data Type

Credit card numbers are numeric data that follow the 14-digit or 16-digit patterns for credit cards.

Pattern:

```
#### #### #### ####  
####-####-####-####  
#### #### #### ##  
####-####-####-##
```

Data Validation

When values are validated against the Credit Card data type, the Designer Cloud® application validates the values using regular expressions. This regular expression method checks for general Credit Card patterns and is fast to evaluate.

Some numerical combinations in the above patterns may be:

- widely known test values
- invalid for credit card numbers

However, some values may follow the regular expression validation pattern but are not accurate credit card numbers. These values may be detected as valid values.
