

Manage Flow Advanced Settings Dialog

The Optimizer feature has been disabled. For more information, see *Release Notes*.

In the Flow Advanced Settings dialog, you can configure the following settings, which provide finer-grained control and performance tuning over your flow and its job executions. From the flow menu, select **Managed advanced settings**.

Logical and physical optimizations for jobs

When this setting is enabled, the Designer Cloud application optimizes job performance on this flow through logical optimizations of your recipes and physical optimizations of your recipes interactions with data.

This feature must be enabled at the workspace level. When enabled, the setting in this dialog overrides the equivalent setting for your workspace.

- See *Workspace Settings Page*.
