

Share a Flow

You can allow other users to work on flows that you own. Flow **collaborators** have almost all of the same permissions as flow **owners**.

NOTE: Users of a shared flow must have read access to the underlying data sources to access the datasets of a shared flow. If they do not have dataset access, collaborators can still access the flow but have more limited capabilities.

NOTE: When you share a flow that contains a dataset sourced from Microsoft Excel, the user with whom the flow is shared may receive a `Could not parse` error. In this case, the user does not have access to the original sample. The workaround is to take a new sample or to run a job on the full dataset.

Steps:

1. In the Flows page, locate the flow to share.
2. From the context menu on the right side of the screen, select **Share**.
3. In the Share Flow dialog, enter the name of the user or users with whom you would like to share the flow.
4. You can specify the privilege level of the user to whom you are sharing.
5. Click **Add**.
6. The selected users can now see the flow and interact with its objects in the Shared with Me tab of the Flows page.

For more information on the privileges of collaborators, see *Overview of Sharing*.
