

Prepare Hadoop for Integration with the Platform

Contents:

- *Create Trifacta user account on Hadoop cluster*
- *HDFS directories*
- *Kerberos authentication*
- *Acquire cluster configuration files*

Before you deploy the Trifacta® software, you should complete the following configuration steps within your Hadoop environment.

NOTE: The Designer Cloud powered by Trifacta platform requires access to a set of Hadoop components. See *System Requirements*.

Create Trifacta user account on Hadoop cluster

The Designer Cloud powered by Trifacta platform interacts with Hadoop through a single system user account. A user for the platform must be added to the cluster.

NOTE: In a cluster without Kerberos or SSO user management, the `[hadoop.user (default=trifacta)]` user must be created on each node of the cluster.

If LDAP is enabled, the `[hadoop.user]` user should be created in the same realm as the cluster.

If Kerberos is enabled, the `[hadoop.user]` user must exist on every node where jobs run.

For POSIX-compliant Hadoop environments, the user IDs of the Trifacta user accessing the cluster and the Hadoop user must match exactly.

UserID:

If possible, please create the user ID as: `trifacta`

This user should belong to the group: `trifactausers`

User requirements:

- Access to HDFS
- Permission to run YARN jobs on the cluster.

Verify that the following HDFS paths have been created and that their permissions enable access to the Trifacta user account:

NOTE: Depending on your Hadoop distribution, you may need to modify the following commands to use the Hadoop client installed on the Trifacta node.

Below, change the values for `trifacta` to match the `[hadoop.user]` user for your environment:

```
hdfs dfs -mkdir /trifacta
hdfs dfs -chown trifacta /trifacta
hdfs dfs -mkdir -p /user/trifacta
hdfs dfs -chown trifacta /user/trifacta
```

HDFS directories

The following directories must be available to the [hadoop.user] on HDFS. Below, you can review the minimum permissions set for basic and impersonated authentication for each default directory. Secure impersonation is described later.

NOTE: Except for the `dictionaries` directory, which is used to hold smaller reference files, each of these directories should be configured to permit storage of a user's largest datasets.

Directory	Minimum required permissions	Secure impersonation permissions
/trifacta/uploads	700	770 Set this to 730 to prevent users from browsing this directory.
/trifacta/queryResults	700	770
/trifacta/dictionaries	700	770
/trifacta/tempfiles	770	770

You can use the following commands to configure permissions on these directories. Following permissions scheme reflects the secure impersonation permissions in the above table:

```
$ hdfs dfs -mkdir -p /trifacta/uploads
$ hdfs dfs -mkdir -p /trifacta/queryResults
$ hdfs dfs -mkdir -p /trifacta/dictionaries
$ hdfs dfs -mkdir -p /trifacta/tempfiles
$ hdfs dfs -chown -R trifacta:trifacta /trifacta
$ hdfs dfs -chmod -R 770 /trifacta
$ hdfs dfs -chmod -R 730 /trifacta/uploads
```

If these standard locations cannot be used, you can configure the HDFS paths. You can apply this change through the *Admin Settings Page* (recommended) or `trifacta-conf.json`. For more information, see *Platform Configuration Methods*.

```
"hdfs.pathsConfig.fileUpload": "/trifacta/uploads",
"hdfs.pathsConfig.batchResults": "/trifacta/queryResults",
"hdfs.pathsConfig.dictionaries": "/trifacta/dictionaries",
```

Kerberos authentication

The Designer Cloud powered by Trifacta platform supports Kerberos authentication on Hadoop.

NOTE: If Kerberos is enabled for the Hadoop cluster, the keytab file must be made accessible to the Designer Cloud powered by Trifacta platform. See *Configure for Kerberos Integration* in the Configuration Guide.

Acquire cluster configuration files

The Hadoop cluster configuration files must be made available to the Designer Cloud powered by Trifacta platform . You can either copy the files over from the cluster or create a local symlink to them.

For more information, see *Configure for Hadoop* in the Configuration Guide.
